Pitch:

Have you ever wished there was a way to play your favorite two games at one? Cube Up combines the relaxing fun of Candy Crush with the puzzling nature of Tetris. Complete levels of varying toughness with different objectives in this cute and colorful world of cubes!

Gameplay:

Cube Up consists of two boards to play, but don't get overwhelmed. In other match 3 type games, upon being matched the pieces go away. However, in Cube Up, those are turned into pieces that can be used on the lower board. A gameplay loop would be something like: User matches 3 blue cubes. The user is then prompted to look down to the lower board, where they can then drop a 3

block blue tetris piece in a location of their choosing. They can then repeat until they have reached the level objective, which is stated before playing the level and also on the top center of the screen.

In other match 3 games, matching other numbers or shapes can result in powerups. This is not the case here, as you will just end up with a cube piece of that shape. Power ups are only limited to login rewards or other purchases, and are shown at the bottom of the screen. Powerups may include a board wipe, a drag to match up to 5 of any color, or a tap to destroy a cube.

Features:
- Move through hundreds of levels, each with varying difficulty! Levels may also vary in objective, such as meeting a point quota or collecting a certain amount of colored cubes.
- Earn a daily streak! Come back to the game daily to earn powerful rewards that can be used to clear harder levels with ease.
- Buy different themes with level rewards! If you don't like the default theme of childish wonder, instead try different themes that change the color of cubes, the background of levels, and the mood of the game.
- No limit to levels! You can play our game as much as you like, no lives of stamina required. That being said, be sure to take breaks if you need them. Upon reaching 2 hours of play time, the game will remind you to take breaks, but will not enforce them.
